

Contents

1	An Introduction to Probability	2
1.1	Probability in Discrete Spaces	2
1.1.1	Representing Events	3
1.1.2	Probability: the P-function	4
1.1.3	Conditional Probability	5
1.1.4	Choosing P	5
1.2	Probability in Continuous Spaces	11
1.2.1	Event Structures for Continuous Spaces	11
1.2.2	Representing P-functions	12
1.2.3	Representing P-functions with Probability Density Functions	13
1.3	Random Variables	14
1.3.1	Conditional Probability and Independence	14
1.3.2	Expectations	15
1.3.3	Joint Distributions and Marginalization	17
1.4	Standard Distributions and Densities	18
1.4.1	The Normal Distribution	19
1.5	Probabilistic Inference	20
1.5.1	The Maximum Likelihood Principle	20
1.5.2	Priors, Posteriors and Bayes' rule	21
1.5.3	Bayesian Inference	22
1.5.4	Open Issues	28
1.6	Notes	30
2	Tracking with Non-Linear Dynamic Models	33
2.1	Non-Linear Dynamic Models	33
2.1.1	Unpleasant Properties of Non-Linear Dynamics	34
2.1.2	Difficulties with Likelihoods	36
2.2	Particle Filtering	36
2.2.1	Sampled Representations of Probability Distributions	36
2.2.2	The Simplest Particle Filter	40
2.2.3	A Workable Particle Filter	44
2.2.4	If's, And's and But's — Practical Issues in Building Particle Filters	46
2.3	Tracking People with Particle Filters	48
2.4	Notes	50
II	Appendix: The Extended Kalman Filter, or EKF	55
