Computer Vision
(with a special emphasis on people)

D.A. Forsyth
Computer Vision
A MODERN APPROACH
FORSYTH  PONCE
Topics

• Monday: Overview, Cameras, Light, Edges
• Tuesday: HOG/SIFT, Classifiers, Detectors, NDD
• Wednesday: Reconstruction and Tracking
• Thursday: People: finding, tracking, activity, faces
• Friday: Applications: shadow removal, shading recovery, texture synthesis, words and pictures

• What’s missing
  • structure from motion
  • most segmentation
  • much detail
  • exercises, homeworks, etc.
Conclusions

- Two major intertwining themes
  - Reconstruction
    - Build me a model of it
  - Recognition
    - What is this like

- Wildly successful field
  - 20 years ago:
    - eccentric preoccupation of few
  - Now:
    - massive impact, including numerous applications
Example problems

- Obstacle avoidance
  - A cricketer avoids being hit in the head (->) (<-)
  - the gannet pulls its wings in in time, by measuring time to contact

- Reconstructing representations of the 3D world
  - from multiple views
  - from shading
  - from structural models, etc

- Recognition
  - draw distinctions between what is seen
    - is it soggy?
    - will it eat me?
    - can I eat it?
    - is it a cat?
    - is it my cat?
Reconstruction

- Build me a model
  - from pictures
  - from video
  - containing
    - geometric information
    - surface texture information
    - where was the camera

- Core ideas
  - describing and matching points
  - camera geometry
Matching

- **Problem:**
  - what matches what
- **Solution**
  - detailed local descriptions of points (SIFT)
Matching points is important
Matching points

- A description of tiny gradients near point is distinctive
  - Lowe’s SIFT feature

Fig 7 from:
Distinctive image features from scale-invariant keypoints
Translation isn’t enough to align the images - we need to use a homography

How cameras work

Pinhole camera - an effective abstraction
What happens in two views

3 degrees of freedom

2 measurements

2 measurements
Structure from motion
All of Camera Geometry

- From the picture
  - two views of a point give four measurements of three DOF
  - this means
    - correspondence is constrained
    - if we have enough points and enough pix we can recover
      - points
      - cameras
Work by Paul Debevec and Jitendra Malik
Match moves

• If you know where the camera is for a sequence you can
  • attach a virtual sequence to the end smoothly
  • insert virtual objects realistically

• Commercial products
  • boujou, MatchMover, 3DEqualizer

• Free research software
  • voodoo
Capturing and animating occluded cloth - R White, K Crane, DA Forsyth SIGGRAPH 2007
Reconstructions from one view

- Symmetry
- Horizontal / vertical planes and contours
- Special geometries
- Texture
- Shading

Recognition

- Problem is somewhat vague
  - what is this
  - what is this like
- Major technologies
  - Classifier
    - stick in a feature, and it says yes/no
  - Rich local feature descriptors (like SIFT)
Finding faces

- Faces “look like” templates (at least when they’re frontal).
- General strategy:
  - search image windows at a range of scales
  - Correct for illumination
  - Present corrected window to classifier
- Issues
  - How corrected?
  - What features?
  - What classifier?
  - what about lateral views?

BMVC 2006
In its simplest form, missing variable problem
Caveats
  - might take a lot of data; symmetries, biases in data create issues

"the beautiful sun"
"le soleil beau"

"sun sea sky"

Looking at People

• What are people doing?

• Hard because
  • hard to extract people from video
    • but quite good trackers are now becoming available
  • hard to know what form the answer takes
    • “walking” vs “running”?
    • “not much of interest” vs “might be a problem”?
    • goals/intentions?
Why are humans important?

- **Surveillance**
  - prosecution; intelligence gathering; crime prevention
  - HCI; architecture;
- **Synthesis**
  - games; movies;
- **Safety applications**
  - pedestrian detection
- **People are interesting**
  - movies; news
Where you are can suggest you are doing something you shouldn’t be

Boult 2001
Bill Freeman flies a magic carpet.

Orientation histograms detect body configuration to control bank, raised arm to fire magic spell.

Freeman et al, 98.
9 An example of a user playing a Decathlon event, the javelin throw. The computer’s timing of the set and release for the javelin is based on when the integrated downward and upward motion exceeds predetermined thresholds.

Motion fields set javelin timing
Freeman et al 98
Sony’s eyetoy estimates motion fields, links these to game inputs. Huge hit in EU, well received in US.

News Faces

- 5e5 captioned news images
- Mainly people “in the wild”
- Correspondence problem
  - some images have many (resp. few) faces, few (resp. many) names (cf. Srihari 95)

Process
- Extract proper names
- Detect faces (Vogelhuber Schmid 00) 44773 big face responses
- Rectify faces 34623 properly rectified
- Kernel PCA rectified faces
- Estimate linear discriminants
- Now have (face vector; name_1,....., name_k) 27742 for k<=4

- Apply a form of modified k-means
US President George W. Bush (L) makes remarks while Secretary of State Colin Powell (R) listens before signing the US Leadership Against HIV/AIDS, Tuberculosis and Malaria Act of 2003 at the Department of State in Washington, DC. The five-year plan is designed to help prevent and treat AIDS, especially in more than a dozen African and Caribbean nations (AFP/Luke Frazza).

German supermodel Claudia Schiffer gave birth to a baby boy by Caesarian section January 30, 2003, her spokeswoman said. The baby is the first child for both Schiffer, 32, and her husband, British film producer Matthew Vaughn, who was at her side for the birth. Schiffer is seen on the German television show 'Bet It...?!' ('Wetten Dass...?!') in Braunschweig, on January 26, 2002. (Alexandra Winkler/Reuters)

British director Sam Mendes and his partner actress Kate Winslet arrive at the London premiere of 'The Road to Perdition', September 18, 2002. The films stars Tom Hanks as a Chicago hit man who has a separate family life and co-stars Paul Newman and Jude Law. REUTERS/Dan Chung

What is an object like?

Viz comic, issue 101
General architecture

Few Examples

Motivating problems

- Near duplicate image detection
  - find pictures in very large collections that are near duplicates of a query
    - trademarks, copyright, storage, matching
- Detecting objects
  - find objects in images using examples
- Detecting and tracking people
  - because they appear in lots of images/movies
- Point matching reconstruction
  - as in previous slides
Near duplicate image detection

- **Strategy**
  - if two images have many small patches that are similar, they might match
  - particularly if the arrangements are consistent

**Query**

**Collection**

**Response**
Sliding window detection

- Detect instances of objects in images
Sliding window detection

Detector: take a description of a window, say yes or no based on examples, statistical test
Sliding window detection

- We use fixed size windows
  - find small objects
    - run windows over big version of picture

- find big objects
  - run windows over smaller version of picture
